PROJECTS

Birthday Reminder

[Live website](#) | [GitHub repository](#)

- A **React** application that allows users to save and manage birthdays of people that they want to remember.
- **Sass** was used for styling the app.
- **Cloud Firestore** was used for the database.
- User authentication was implemented with **Firestore Authentication**.
- To test the app, log in with dummy123@email.com and dummy456.

Memories

[Live website](#) | [GitHub repository](#)

- A fullstack, social-media application built with **React** and **Express** that allows users to share with others their memorable moments, or popular places that they have visited.
- The app was written with **TypeScript**.
- **Redux Toolkit** was used for state management.
- **Styled Components** were used for styling.
- The app was powered by a **MongoDB** database.
- To test the app, log in with john123@email.com
