PROJECTS

EasyAppoint

[Live website](#) | [GitHub repository](#)

- A full-stack application made with **React**, **Material UI**, and **Express** that allows users to manage their appointments.
- **React Query** was used for managing server state in the client-side app.
- All the user and appointment data are stored in a **MySQL** database.
- To test the app, log in with **testUser** (username) and **pass123** (password).

Memories

[Live website](#) | [GitHub repository](#)

- A full-stack, social-media application built with **React** and **Express** that allows users to share with others their memorable moments, or popular places that they have visited.
- The app was written with **TypeScript**.
- **Redux Toolkit** was used for state management.
- **Styled Components** were used for styling.
- The app is powered by a **MongoDB** database.

SKILLS

- HTML
- CSS / Flexbox / Grid
- Sass (SCSS)
- Responsive Design
- JavaScript / ES6
- TypeScript
- React / Hooks / Context
- Redux / Redux Toolkit
- Material UI
- Styled Components
- Gatsby
- Node.js / Express
- SQL (MySQL)
- MongoDB / Mongoose
- Firebase (Cloud Firestore / Firebase Authentication)
- Git / GitHub
- npm

EDUCATION

- Log in with **john123@email.com** and **john123** to test the app.

Birthday Reminder

[Live website](#) | [GitHub repository](#)

- A **React** application that allows users to save and manage birthdays of people that they want to remember.
- **Sass** was used for styling the app.
- **Cloud Firestore** was used for the database.
- User authentication was implemented with **Firebase Authentication**.
- Log in with **dummy123@email.com** and **dummy456** to test the app.
